

calsol *uc berkeley solar car team*

Adopt-A-Cell Program

CalSol is a recognized competition vehicle team representing UC Berkeley. Completely student-led and open to all Cal students, CalSol designs and builds one-seater solar vehicles for solar competitions.

Students involved in CalSol learn many important skills not taught in the classroom. Instead of merely cranking out problem sets, students get the chance to apply scientific and engineering theories to real world situations and are given the freedom to think up creative solutions and ideas of their own. The team project atmosphere also encourages good teamwork and communication between team members, all vital skills to help prepare Cal students for their future in industry, academia, business, etc.

CalSol also works to expose the public to the possibilities of alternative energy and inspire the younger generation to become interested in science. CalSol showcases its cars at various events and expos, where CalSol team members answer questions and interacts with the public.

Family and friends of CalSol can support us by adopting solar cells in their names. Each solar cell can be adopted for \$20, or a set of six solar cells adopted at \$120. And as a token of appreciation for your support, we offer the following benefits:

- ✓ Tax deductibility on your contribution
- ✓ Your name listed on our website
- ✓ CalSol team T-shirt (for adoptions of \$100+)

CalSol Adopt-A-Cell Program

Yes! I would like to adopt ___ solar cells for a total of \$ _____. (\$20 per cell)

Please check here for tax deductible forms
